

What is the Truth About Vaccines?

by Lisa Middlecamp-Lowder, Ph.D.
Certified GAPS Practitioner

For decades we have been told that vaccines helped stop epidemics and save the lives of people around the world. But who was making this claim? By chance, was it funded by the industry that stood to gain financially from selling the vaccines? And, what if vaccines actually harm the immune system and lead to illness later (and sometimes immediately)? We need to ask these hard questions as now the statistics show that the U.S. ranks the highest in infant mortality of the 20 wealthiest nations on earth. We need to ask why fibromyalgia and autoimmune diseases are skyrocketing. We need to question bypassing our innate protection (skin, digestive system) and injecting unknown matter directly into our muscles.

PLEASE, DO YOUR OWN RESEARCH. And when you do, be aware of funding sources.

Did you know....

The immune system:

* We have a 2 part immune system: The cellular branch of the immune system makes us look sick because it is digesting and getting rid of the germ (measles, chicken pox). The humoral branch of the immune system produces antibodies and recognizes/identifies things that would harm us ("germs"). A healthy balance of cellular and humoral immune function is vital to good health. **Vaccines bypass the cellular system by direct stimulation of the humoral branch.**

* Research shows that vaccines can overstimulate the humoral branch and inhibit the cellular branch, leading to immune suppression. Immune suppression and over stimulation of the humoral branch may show up as **allergies, autoimmune disorders, neurological disorders, etc.**

* Breastfeeding, probiotics, antioxidants, and allowing the natural course of illness to occur enhance immune balance while heavy metals, toxins, infant formula, Tylenol, antibiotics and sugar lead to immune imbalance.

The eradication of disease and facts about vaccines:

* **80% of the total decline in mortality**, since records began to be kept in the United Kingdom in 1860, **occurred before any vaccine** or antimicrobial drugs were available and 90% or more before there was any national vaccine program.

* **Diseases declined and longevity increased due to hygiene, running water and refrigeration and stopping the use of DDT.**

* **The H1N1 flu vaccine is 60 times more likely to cause a miscarriage** than regular seasonal flu vaccines according to VAERS (Vaccine Adverse Event Reporting System).

* The oral polio vaccine was banned from use in the United States in 2000. The reason for this ban was because **too many children were developing vaccine associated paralytic polio (VAPP)** as a serious side effect of the oral vaccine.

* In 1977, **Dr. Jonas Salk** who developed the first polio vaccine, **testified** along with other scientists, that **mass inoculation against polio was the cause of most polio cases in the USA** since 1961.

Vaccine Ingredients

Here's what the CDC tells us of the common substances found in vaccines:

- Aluminum gels or salts of aluminum which are added as adjuvants to help the vaccine stimulate a better response.

- Antibiotics are added to some vaccines to prevent the growth of germs (bacteria) during production and storage of the vaccine.

- Egg protein is found in influenza and yellow fever vaccines, which are prepared using chicken eggs.

- Formaldehyde is used to inactivate bacterial products for toxoid vaccines, (these are vaccines that use an inactive bacterial toxin to produce immunity.)

- Many vaccines contain human diploid cells which were extracted from aborted fetuses.

- Thimerosal is a mercury-containing preservative that is added to vials of vaccine that contain more than one dose to prevent contamination and growth of potentially harmful bacteria.

Vaccine Research

In late August, 2014, Senior Scientist William Thompson from the CDC came out about research data modification in the MMR/autism study of 2004. Data was omitted and changed to hide the significant link between vaccines and autism. **As of April 2018, Dr. Thompson still has not testified before Congress even though he wants to.**

* **Over 400 papers in peer reviewed journals have been published documenting and exploring vaccine injury and death.**

Profits from Vaccines

* Each year, drug companies in the United States make over \$10 billion from vaccines.

Exemptions:

* In Michigan, right now, you have 3 ways to protect your child from vaccines - medical, religious and philosophical.

* By joining Michigan for Vaccine Choice, you help support your right to be the decision maker of what is injected into yourself and your children.

Sources and Resources:

The movie VAXXED details the CDC whistleblower, William Thompson, Ph.D.'s attempts to share the truth about the cover-up at the CDC in the 2004 study of the MMR vaccine and autism.

Letter to the Editor Fruitport Township 7/23/18 Board Meeting Report

by Linda Corinti - nospinggrandma

I'm a Fruitport resident interested in the goings on in the township. I try to attend the meetings but like a lot of people: life gets in the way. Sadly, if people don't know or pay attention to their government and its actions, it can run amuck and before you know it, laws and/or ordinances and fees can be instituted which most people would find objectionable. I recently attended our Fruitport Township meeting and inquired about some rumors that were circulating regarding someone outside the government staff given a key to the building and authorized that person access to information in computers which not only had all residents personal information but data including property assessments, names, data that some of us wouldn't appreciate being accessed without authorization. (In fact, some of this is public record and can be obtained at the county.) In this day and age, one's life history is computerized. I inquired of the township supervisor since the rumor was that she had given her best friend (an attorney she said) a key which she claimed only accessed her office. I thanked the supervisor for clearing the rumor up but after some investigating, her story didn't ring true. The person was seen using a computer of the staff and indeed downloaded and ran off material from that computer. The story circulating was that this person has been in the office more than one time and the key probably is to the Supervisor's outside door which allowed her access to everywhere in the building. Since this had been brought up at the previous meeting it should have been in the minutes. The board member, Mr. Hulka, requested that the minutes contain the fact that the supervisor had given the key to an unauthorized person.

Another rumor to be clarified: the supervisor had the tables in the township removed to allow her relative to use them for a garage sale. I really don't know the legality of this but I would wonder if that is legal. This caused some concern because they had been set up for a scheduled Township meeting. I hear she does most things without asking or seeking advice. This is a concern. I did ask her who she reported to, "the public," she stated.

At last night's meeting this seemed to be the case when the discussion of the police contract was brought before the board. It was said that a clause in this contract was of concern to the board and indeed the township attorney was strongly advising against it as stated. The issue is simply: a transgression of an employee which happened five years before could not be used in determining the discipline of a present situation. The township attorney stated that he didn't know the supervisor was meeting with the union and would have strongly advised against letting this stand. The supervisor said she advised him, he stated she did not. His opinion was if the township couldn't use the previous infraction, then if the case went to arbitration, the arbitrator couldn't use it either. He spoke his opinion several times with the strongest tone. Sadly, the board voted with only three (Treasurer Rose Dillon, Clerk Andrea Anderson, Trustee Denise Winebarger) voting against. Apparently, the other four wanted to stay on the good side of the police employees which is why these decisions need to be made during committee negotiations.

These are the concerns from just one board meeting.

VACCINE SCHEDULE COMPARISON

1983 ²² doses

2 Months: Diphtheria
2 Months: Tetanus
